

Monitoring Environmental Performance

As part of the college's Environmental Management System the Facilities & Estates Manager undertakes an internal audit of the college's environmental aspects. This audit looks at progress towards Objectives and Targets and determines the overall effectiveness of the management system.

The Audit undertaken by the Facilities & Estates Manager also examines environmental legal compliance and the environmental performance of the entire college in relation to energy and water consumption, transport usage, waste production and CO₂ output.

Many of the above environmental aspects are also reviewed and analysed as part of the college's annual Sustainability Report.

If any issues or non-conformances are identified with the Environmental Management System or the college's activities and processes corrective action is taken to rectify all problems.
